Re: CALFED Proposed Stage 1 Bundles of Actions

In an effort to move effectively into CALFED Program implementation early in the year 2000, following adoption of a Final EIR/EIS and Record of Decision, CALFED staff and Program Managers have come up with a list of high priority actions for implementation prior to or shortly after the certification of these documents. The actions have been grouped into seven "bundles", to address specific regions within CALFED's defined problem and solution areas or to provide balance between actions not necessarily associated with any specific geographic area. CALFED staff is soliciting comments on these bundles of priority actions, some of which are ongoing as part of early Category III implementation and other agency programs, and others which are anticipated to be implemented during the first two years of Program implementation.

These bundles of actions were presented to the Bay Delta Advisory Council (BDAC) at its meeting in Bakersfield, March 25, 1999, for review and comment. It is expected that these bundles will undergo further review and refinement, based on public and agency input, over the next few months. They will be included in the Revised Draft Programmatic EIR/EIS to be released in June 1999, and will eventually be approved as part of the Final EIR/EIS and Record of Decision early in 2000.
